

Strathy Gold Project
Focused Follow-up on a New Discovery in the Abitibi

Investor Presentation

SGC-TSX.V June 2026

Forward Looking Statements

This presentation contains certain forward-looking statements (“FLS”) including, but not limited to the need for more prospecting and analysis, that the geological and structural setting at SGP is highly prospective for gold mineralization, the focus of follow-up efforts on promising geochemical and mineralogical anomalies, the potential for gold anomalies in samples to be high, and the extension of a drilling program this year. FLS can often be identified by forward-looking words such as “approximate or (~)”, “emerging”, “goal”, “plan”, “intent”, “estimate”, “expects”, “potential”, “scheduled”, “may” and “will” or similar words suggesting future outcomes or other expectations, beliefs, plans, objectives, assumptions, intentions or statements about future events or performance. In respect of the FLS, the Company has made certain assumptions that management believes are reasonable at this time. The assumptions include that the Company will have sufficient financial resources for sampling and prospecting this year, that gold discoveries will be to the level anticipated however, there can be no assurance that such assumptions and statements will prove to be accurate and actual results could differ materially from those anticipated in such statements. Factors that could cause actual results to differ materially from any FLS include, but are not limited to, limited capital or access to additional capital for prospecting, delays in obtaining or failures to obtain required TSXV, governmental, environmental or other project approvals, inflation, changes in exchange rates, fluctuations in commodity prices, delays in the development of projects, regulatory approvals and other factors. FLS are subject to risks, uncertainties and other factors that could cause actual results to differ materially from expected results.

Potential shareholders and prospective investors should be aware that these statements are subject to known and unknown risks, uncertainties and other factors that could cause actual results to differ materially from those suggested by the FLS. Shareholders are cautioned not to place undue reliance on FLS. By their nature FLS involve numerous assumptions, inherent risks and uncertainties, both general and specific that contribute to the possibility that the predictions, forecasts, projections and various future events will not occur. Solstice undertakes no obligation to update publicly or otherwise revise any FLS whether as a result of new information, future events or other such factors which affect this information, except as required by law.

Historical Sampling and Drilling Data and Information

Some sampling and drilling data and information presented on slides 7 and 9 of this presentation (the “Historical Exploration Information”) is historical in nature. The reader is cautioned that the Historical Exploration Information is based on prior data and reports previously prepared by third parties without the involvement of Solstice. Solstice has not undertaken any independent investigation, nor has it independently analyzed the results of the Historical Exploration Information in order to verify the results. The reader is cautioned not to treat Historical Exploration Information, or any part of it, as current and that a qualified person has not done sufficient work to verify the results and that they may not form a reliable guide to future results. No independent quality assurance/quality control protocols are known for these historic samples and drill holes and therefore the Historical Exploration Information may be unreliable. Solstice considers these historical drill results relevant as the Company will use this data as a guide to plan future exploration and drilling programs. Solstice considers the data to be reliable for these purposes, however, the Company's future exploration work will include verification of the data through drilling.

Paul Chamois, M.Sc., P.Geo., is the Qualified Person as defined by NI 43-101 standards responsible for reviewing and approving the technical disclosures of this presentation.

Why Own Solstice and Why Now?

BOARD

Strong support from Board – solid share structure.
Management and Board own 38.8% of the Company.

MANAGEMENT

Strong and successful technical team. Discovery of a major Canadian Gold deposit (AME Colin Spence award).

PROJECT QUALITY & LAND POSITION

Red Cedar Discovery of 8.5g/t Au over 3.5m.

Discovery expanded with **multiple occurrences of visible gold, and multiple high-grade intercepts** surrounding Red Cedar.

New Polymetallic Intercept mimics “Leckie-type” mineralization seen 600m to the W (historic intercepts on SGC claims of **5.0 g/t Au over 17.2 m**)

VALUE CREATION

Discovery from grassroots exploration = exceptional value creation,
→ **High Torque** ←

Strathy Gold Project – Temagami Greenstone Belt

ABITIBI SUBPROVINCE

- Most prolific Gold region in Canada
- Access to labour & mining expertise
- Excellent infrastructure
 - TransCanada Hwy runs through Property
 - Proximity to mines & mills

GOLD

- ▲ Producing Mine
- ▲ Past Producer
- ▲ Developed Prospect with Reserves

NON-GOLD

- ★ Producing Mine
- ☆ Past Producer
- △ Developed Prospect with Reserves

— Fault: Major, Minor

Drill Results – Red Cedar Area

Drill Results

Red Cedar intercepts:

- High-grade gold is widespread
- Visible gold in 3 intercepts
- New polymetallic target of 3.09 g/t Au, 20.80 g/t Ag, 0.88% Zn and 0.27% Pb over 3.83 m

59.40/0.50 Au (g/t) / metres

- >5g/t Au
- 1-5 g/t Au
- 0.5-1.0 g/t Au
- 0.25-0.5 g/t Au

3.09/3.83
***New Polymetallic target**

Red Cedar Discovery Area

RED CEDAR DISCOVERY AREA

8.52g/t Au over 3.5m including 28.7 g/t Au over 1.0m (SGPDH25-09)

- 59.60 g/t Au over 0.5m, **vg** (SGPDH26-04)
- 25.10 g/t Au over 0.6m, **vg** (SGPDH26-11)
- 8.37 g/t Au over 0.4m, **vg** (SGPDH26-11)

LARGE TARGET AREA

Approx. 600m x 1,000m in extent
Entirely open to the Northeast

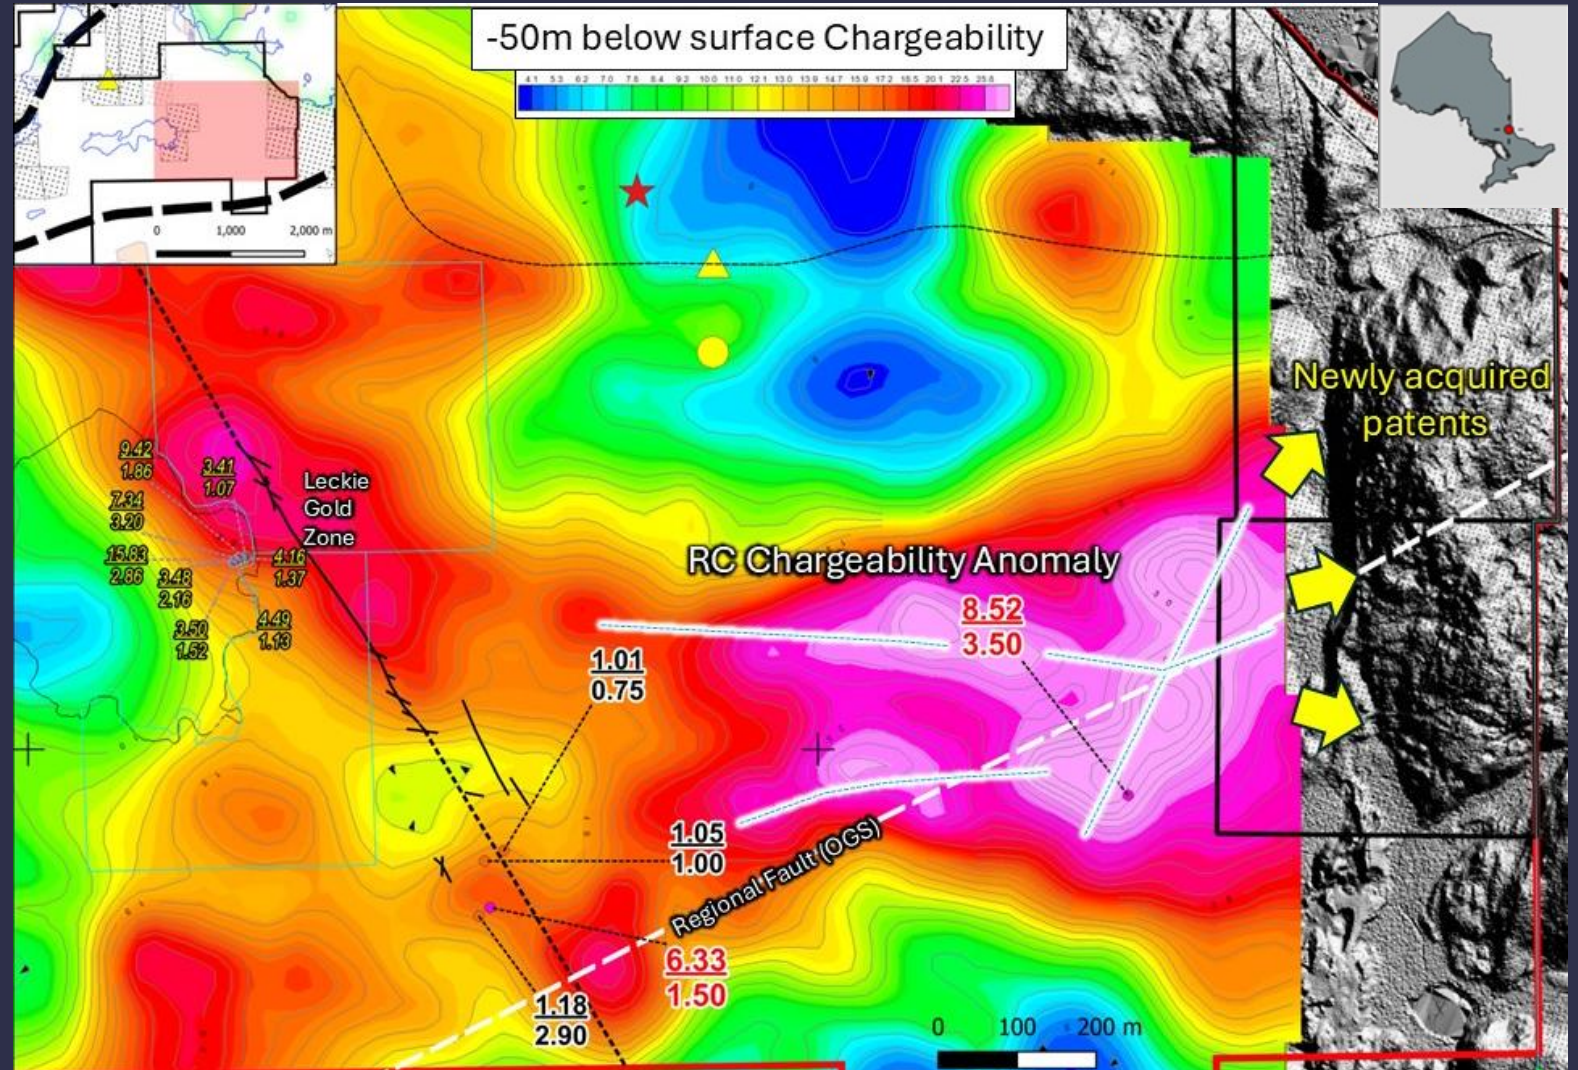

EXPANDED LAND PACKAGE

47 hectares acquired directly adjacent to Red Cedar Anomaly
Potential expansions of anomaly fully protected

HIGH CHARGEABILITY & RESISTIVITY

Target could be largely silicified mafic volcanics based on high chargeability and high resistivity

Red Cedar Discovery Area

RED CEDAR DISCOVERY AREA

8.52g/t Au over 3.5m including 28.7 g/t Au over 1.0m (SGPDH25-09)

- 59.60 g/t Au over 0.5m, **vg** (SGPDH26-04)
- 25.10 g/t Au over 0.6m, **vg** (SGPDH26-11)
- 8.37 g/t Au over 0.4m, **vg** (SGPDH26-11)

POLYMETALLIC TARGET

“Leckie-type” 3.09 g/t Au, 20.80 g/t Ag, 0.88% Zn and 0.27% Pb over 3.83 m

600m from historic Leckie Gold Zone, which includes historic intercepts of 5.00 g/t Au over 17.28 m and 7.66 g/t Au over 7.25 m on SGC claims

Visible gold in SGPDH26-04

Polymetallic target in SGPDH26-07

Aggressive Follow-up on A New Discovery

Q2-Q3 2026

STRIPPING & GEOLOGICAL MODELLING

Stripping, channel sampling, and surface mapping to get a detailed understanding of geological structures influencing gold deposition in the area

This leads to better geological modelling and therefore much better and more precise drill targeting.

Q3-Q4 2026

DRILLING

Aggressive focus on building out a potentially larger gold system in this largely unexplored area of the prolific Abitibi Subprovince:

Expanding upon multiple high-grade and visible gold intercepts

Connecting “Leckie-type” Polymetallic intercept with Leckie Gold Zone – over 600m of undrilled permissive geology
